
eduroam - One Page Quick Guide

eduroam, by InCommon, is how you can quickly get connected to Wi-Fi. It's an international roaming service for users in higher education and provides easy and secure network access wherever eduroam is available.

To get connected to eduroam:

1. On your laptop or phone, search for available Wi-Fi.
2. Connect to "eduroam".
3. Enter your TFS e-mail address and password.
4. Accept the security certificate.
5. Start browsing the web.

As you visit various locations where eduroam is available, your device will automatically connect to the network. No need to get a "NetID" or request guest access when visiting headquarters, for example. Just sign into eduroam.

Download the eduroam companion app to find eduroam Wi-Fi hot spots near you:
